

Corona virus

and return to school

We all get sick sometimes. If I get sick, then I need to stay until I get better.

There is a new illness called Corona Virus. Most people get a cough and a cold and get better by staying at home. Some need to go to hospital to have care by doctors and nurses to get better.

A cough and a sneeze may be just a cold.

We can stay healthy by keeping clean.

I can keep clean by washing my hands before eating and after eating. I can wash my hands after going to the toilet. If I am not near a tap, I can use hand sanitizer instead.

If I have a cough or sneeze, I need to cough or sneeze into my elbow or shoulder. If I use a tissue, I need to throw it in the bin. Then I need to wash my hands.

There is lots of news about Corona Virus. Some of it might sound a bit scary. It is ok to feel scared but it is important to talk to someone you trust about your feelings.

Our state of South Australia is doing very well in controlling the Covid virus. Our government wants us to go back to school to learn with our friends. Mum and Dad will tell me when it's safe to go back to school.

It is still important to practise good hygiene measures to keep us all safe. But I can go to school, learn and have fun with my friends.
